

## **Go Compostable GreenTableware Kit Introduced To Market**

GoGreenInStages.com Introduces the Go Compostable Green Event Tableware Kit for environmentally friendly meetings, conferences, parties and events.

**Montreal, Quebec November 18, 2009** -- GoGreenInStages.com, a leading environmentally friendly products company today introduced the Go Compostable Green Tableware Kit for company meetings, community events and holiday parties.

Each kit consists of biodegradable and compostable food service products to host an event for up to 100 guests. The kit contains plates, glasses, cups, cutlery, napkins and waste bags to simplify your green event planning.

“There is an increased interest in using responsible disposable products at business and social events” says Julia Mackiewicz, founder of Go Green InStages. “People want compostable and biodegradable tableware but find them difficult to source. Typically, all that is available is plastic and foam tableware products.”

For organizations using disposable cups, glasses, plates and cutlery, the compostable tableware kit offers a convenient cost effective way to switch to a greener more responsible option. All the products in the Go Compostable Tableware Kit are made from annually renewable, sustainably derived materials such as sugar cane pulp (bagasse) or PLA (polylactic acid made from corn).

Please visit [GoGreenInStages.com](http://GoGreenInStages.com) for more information on the Go Compostable Tableware Kit. These kits are conveniently available for purchase online and are shipped directly to your location.
